ALIGNPOCT

THE FLAGSHIP ENTRY OFFER

Program Assessment & Strategic Roadmap

A defined, expert-led review of your point-of-care testing program—led personally by Angela Gamble, MHA, MLT, Founder & Principal Consultant.

Who it's for

Healthcare organizations whose point-of-care testing has outgrown local fixes: hospitals and health systems, ambulatory networks, urgent care groups and clinics—especially multi-site programs facing growth, variation between locations, inspection pressure, or governance that no longer matches the size of the program.

What the assessment examines

- Workflows and practices across agreed sites and test families
- Governance structures, ownership and accountability
- Regulatory and accreditation readiness
- Competency and training processes
- Quality systems, documentation and evidence
- Device fleet, middleware and connectivity coordination

How it works

1. **Discovery conversation.** A brief first call—your footprint, your priorities, and whether the assessment fits.
2. **Defined assessment.** Angela reviews the agreed workflows, records and processes. Scope, sites and evidence are set before work begins.
3. **Findings & roadmap.** An evidence-based picture of the program, gaps and risks identified, and a prioritized roadmap with ownership recommendations.
4. **Your next step.** Implement with your own team, or scope implementation and ongoing advisory support with Align. The roadmap is yours either way.

What you receive

- An evidence-based picture of your program as it operates today
- Identified gaps, risks and information needs
- A prioritized, practical roadmap your leadership can act on

> **Why Angela:** More than three decades in laboratory medicine and over two decades dedicated to point-of-care testing, including senior laboratory operations leadership for a large, multi-site healthcare system. National speaker on POCT operations, regulatory readiness and technology—and personally involved in every Align engagement, from discovery through implementation planning.
